

I get paid in sixty days.

I need the money now.

01

Ship and invoice

I deliver to a big retailer and send a \$1,000 invoice.
Their terms are sixty days.

02

A lender fronts it

They advance most of the face value today, and
collect the full amount from the retailer later.

03

They keep the spread

The gap between what they paid me and what they
collect is their return.

Every lender sees
what the others bid.

Lender 01

VISIBL

\$ 800

Reads the book, then matches it

Lender 02

VISIBL

\$ 800

No reason to go higher than anyone else

Lender 0.2

ISIBLE

\$ 800

Bidding more only costs them margin

So nobody competes. They all sit at the same number, and the supplier pays for it.

Privacy or compliance. Pick one. We didn't.

Bidnox

Sealed bids

Every bid is encrypted in the lender's own browser before it is submitted. Only the winning amount is ever decrypted. Losing bids stay sealed permanently.

Cleanverse

Verified parties

Every wallet in the deal holds an A-Pass. It is checked at every action, not once at signup. The contract will not move money without it.
